CAREER OBJECTIVE

Final-year AI & Data Science undergraduate (graduating 2027, CGPA 8.70/10) with hands-on experience building ML/CV systems, Power BI analytics dashboards, and Python automation pipelines. DP-600 (Microsoft Certified: Fabric Analytics Engineer Associate) and AWS Cloud Practitioner certified. Seeking an entry-level Data Engineer, AI Engineer, or Software Engineer role to apply production-oriented machine learning and data engineering skills to real-world problems.

TECHNICAL SKILLS

- **Programming Languages:** Java, Python, C, SQL
- **Databases:** MySQL, PostgreSQL
- **Data Analytics & Visualization:** Power BI, Tableau, Pandas, NumPy, Matplotlib, Seaborn
- **Machine Learning:** Scikit-learn, TensorFlow
- **AI Technologies:** LangChain, RAG, Agentic AI
- **Cloud:** AWS (Basics)
- **Developer Tools:** Git, GitHub, VS Code, MySQL Workbench

CERTIFICATIONS

- Microsoft Certified: Fabric Analytics Engineer Associate (DP-600) — Microsoft, 2026
- AWS Cloud Practitioner Essentials — AWS Training & Certification
- Data Analytics with Python — NPTEL Online Course ("Elite")
- Cloud Computing Skill Competition — TN Skill 2025 (Level 1 & 2 cleared)
- TCS CodeVita Season 13 — Global Ranking 14,322

EXPERIENCE

Tech Associate, Inaiyam Innovations *Jul 2025 – Oct 2025*

- Built Python-based automation pipelines to process agricultural datasets and auto-generate PDF reports, cutting manual reporting time and freeing the team to focus on analysis instead of formatting.
- Performed data validation and GIS-based crop health analysis using vegetation indices (NDVI, NDMI), collaborating with field and data teams to support precision-agriculture decisions.

AIML Virtual Intern, Eduskill, in association with Google for Developers *Apr 2025 – Jun 2025*

- Built an object detection model with TensorFlow, applying computer vision techniques to identify and classify objects in image data.
- Completed structured, hands-on training covering core AI and machine learning workflows, from data preprocessing to model evaluation.

PROJECTS

J.A.R.V.I.S — Personal Voice Assistant

- Built a Windows-first AI voice assistant in Python using a goal-based agent architecture that interprets user intent, plans multi-step tool actions, and executes them autonomously instead of relying on rigid command matching.
- Designed a cinematic desktop UI with a live transcript panel, task widgets, and full speech controls for an interactive voice-driven experience.

FinanceFlow — Personal Finance App

- Developed a cross-platform personal finance app using Expo, React Native, TypeScript, and Supabase with real-time data sync.
- Implemented transaction tracking, custom category management, chart-based analytics, and a savings-rate panel to surface spending and saving insights.

AirType — Hands-Free Dictation Tool

- Built a Windows desktop app enabling system-wide hands-free dictation, using Windows UI Automation (COM APIs) to track active input fields in real time.
- Implemented dual speech-recognition modes (live streaming via Google Cloud Speech-to-Text and an offline fallback) with reliable keystroke-based text injection and a customizable floating overlay UI.

TALK2D — Natural Language to Database Query Tool

- Developed an AI-powered natural-language-to-database query interface supporting MySQL, PostgreSQL, SQLite, and MongoDB from a single tool.
- Built auto-visualization (bar, pie, line, scatter, area charts), a schema explorer, query history, and a connection manager, powered by free AI models via OpenRouter.

IPL Analysis Dashboard

- Built an interactive Power BI dashboard analyzing 900+ IPL matches (2008–2024) to surface player performance, venue statistics, and toss-impact trends.
- Designed dynamic visuals with DAX measures, KPIs, and interactive filters, turning raw match data into actionable insights on team and player performance.

Smart Vehicle Detection & Security System

- Developed a real-time vehicle detection and tracking system using YOLOv11 and OpenCV to monitor line crossings and generate annotated surveillance footage.
- Integrated license-plate recognition with EasyOCR and automated daily Excel report generation with timestamps, vehicle details, and captured snapshots — eliminating manual log entry.

ACHIEVEMENTS & LEADERSHIP

- Solved 150+ coding problems across competitive programming platforms.
- Participated in the ABB Hackathon, developing solutions for real-world engineering challenges.
- Served as Joint Coordinator – Data Management & Website for DAKSHAA'26, managing event data and contributing to website development.

EDUCATION

B.E. in Artificial Intelligence and Data Science — Year of Passing: 2027
K.S. Rangasamy College of Technology, Tiruchengode — CGPA: 8.70/10

HSC – Computer Science with Mathematics — Year of Passing: 2023
Sankar Ponnar Higher Secondary School, Palani, Dindigul — Percentage: 89%
